UPTIME(1)
                             Linux User's Manual
                                                                     UPTIME(1)
NAME
      uptime - Tell how long the system has been running.
SYNOPSIS
      uptime
      uptime [-V]
DESCRIPTION
      uptime gives a one line display of the following information. The cur-
      rent time, how long the system has been running, how many users are
      currently logged on, and the system load averages for the past 1, 5,
      and 15 minutes.
      This is the same information contained in the header line displayed by
      w(1).
      System load averages is the average number of processes that are either
      in a runnable or uninterruptable state. A process in a runnable state
      is either using the CPU or waiting to use the CPU. A process in unin-
      terruptable state is waiting for some I/O access, eq waiting for disk.
      The averages are taken over the three time intervals. Load averages
      are not normalized for the number of CPUs in a system, so a load aver-
      age of 1 means a single CPU system is loaded all the time while on a 4
      CPU system it means it was idle 75% of the time.
FILES
      /var/run/utmp
             information about who is currently logged on
      /proc process information
AUTHORS
      uptime was written by Larry Greenfield <greenfie@gauss.rutgers.edu> and
      Michael K. Johnson < johnsonm@sunsite.unc.edu>.
      Please send bug reports to <albert@users.sf.net>
